```
Java
class Solution {
    public int minimumLength(String s) {
JavaScript
 * @param {string} s
 * @return {number}
var minimumLength = function(s) {
};
TypeScript
function minimumLength(s: string): number {
};
C++
class Solution {
public:
```

```
int minimumLength(string s) {
};
C#
public class Solution {
   public int MinimumLength(string s) {
Kotlin
class Solution {
   fun minimumLength(s: String): Int {
Go
func minimumLength(s string) int {
```
